Ammonia Inhalant Solution

Product Description

James Alexander Corporation's Ammonia Inhalant Solution is a proprietary formulation used to prevent or treat fainting.

Active Ingredients

The active ingredient in Ammonia Inhalant is Strong Ammonia Solution NF. The formulation is precisely adjusted to yield an ammonia concentration of 18.5% w/w. The formulation also contains 35.0-40.0% v/v Dehydrated Alcohol USP.

Federal Government. Specifications

JAC's Ammonia Inhalants fully meet the U.S. Government's specification number U-A-500B dated March 30, 1976 for Aromatic Ammonia Inhalants.

Product Stability

JAC's Ammonia Inhalants carry a five (5) year expiration date, the maximum allowed by the Food and Drug Administration.

Directions For Use

Ammonia Inhalants are used for inhalation only to prevent or treat fainting. The inhalant should be held away from the face while activating the package. To break the inner vial, crush ONCE between the thumb and forefinger at the dot located at the center of the inhalant. Pass the inhalant back and forth close to the nose of the affected person several times. If the condition persists, consult a physician. Discard inhalant after use. Caution-Ammonia Inhalant formulation is flammable. Keep away from heat and open flame.

JAC Product Configuration and Packaging

JAC's Ammonia Inhalants are offered as a unit dose inhalant containing 0.3 mls of solution in the following packaging options:

JAC Product Code G-3301– bulk unit dose inhalants. Packaged 15,000 units per carton.

JAC Code 33201- inhalants packaged 100 per box.

JAC Code 33301- inhalants packaged 10 per box (designed for use in first aid kits).
