## Snap Top Vials

### Package Design

The James Alexander glass snap top vial offers an economical, convenient package with a wide variety of applications in the pharmaceutical and diagnostic fields. The hermetically sealed snap top vial is ideal for products which are unstable or sensitive to environmental exposure.

JAC's snap top vial is made of USP type I, borosilicate glass. Borosilicate glass is composed principally of silicon dioxide and boric oxide, with low levels of the non-network forming oxides. It is a chemically resistant glass characterized by low leachability.

### Sizes and Print Options Available

The JAC Snap Top Vial is available in 1, 2, 5, and 10 milliliter sizes. All sizes of snap top vials can be silk-screened (printed) in a variety of attractive colors. The print copy may include a customer logo, instructions for product use, lot number, and descriptive information regarding the product.

### Package Variations Available

- \* To address concerns regarding broken glass when the snap top vial is opened, plastic "safety-break sleeves" are available to protect the user.
- \* Hazardous and volatile liquid chemicals or reagents are handled routinely.
